PROFESSIONAL SUMMARY

AI Systems Engineer specializing in production RAG pipelines, low-latency microservices, and distributed data systems. Hands-on experience developing asynchronous backend microservices, event-driven streaming with Apache Kafka, cutting query latency by 86%, and building resilient architectures for telecom order management and anomaly detection systems.

TECHNICAL SKILLS

Languages:	Python, Java, TypeScript, JavaScript, SQL, C
AI & Generative AI:	LLMs, RAG Architectures, ChromaDB, LangChain, Hugging Face, PyTorch, Scikit-Learn, Vector Embeddings, CAG
Backend & Distributed:	FastAPI, Node.js, Express, RESTful APIs, Apache Kafka, Event-Driven Architecture, Microservices
Databases & Tools:	PostgreSQL, MySQL, MongoDB, Redis, Firebase, Docker, Git, CI/CD, Pytest

WORK EXPERIENCE

Software Engineer – Dhan AI, Hyderabad, India Jul 2026 – Present

- Contributed to an enterprise microservices mesh spanning 100+ distributed services in TypeScript, automating core order workflows for the telecom industry.
- Designed event-driven messaging pipelines using Apache Kafka, enabling sub-second bidirectional synchronization between Salesforce and Microsoft Dynamics 365.
- Built resilient RESTful APIs handling 10,000+ daily payload requests with structured rate limiting, token authentication, and centralized error handling.

Software Engineer Intern – Dhan AI, Hyderabad, India Jan 2026 – Jul 2026

- Designed and developed backend REST APIs for enterprise telecom order management, automating order processing and updates across external systems.
- Configured SonarQube static analysis quality gates and authored comprehensive Jest test suites, maintaining 90%+ code coverage and schema integrity.

Team Lead – Software Development – EPICS at Arizona State University Aug 2024 – Dec 2025

- Led development of an end-to-end IoT water quality monitoring system, streaming ESP32 sensor telemetry to Firebase in real time.
- Applied supervised ML regression models to analyze sensor telemetry (pH, turbidity, salinity), forecasting quality trends with 91% accuracy.

Project Manager – Assistive Technology Lab 2024 – 2025

- Developed an embedded EMG gesture recognition system classifying 5 hand movements using Python, Raspberry Pi, and Scikit-Learn.
- Engineered a real-time signal processing pipeline achieving <50ms response latency for assistive prosthetic control.

PROJECTS

AcaRAG-Pro – Production RAG Intelligence System | Python, FastAPI, Groq LLM, ChromaDB, Docker 2025 – 2026

- Engineered a document-grounded RAG chatbot to parse, index, and query complex institutional PDF documents with source attribution.
- Implemented multi-tier Cache-Augmented Generation (CAG) with semantic caching, slashing repeated query latency from 3.5s to 0.5s (86% latency reduction).
- Containerized microservices with Docker and exposed asynchronous FastAPI endpoints supporting concurrent document vectorization.

Transac-NOVA – High-Throughput Financial AI Pipeline | Python, FastAPI, Scikit-Learn, Kafka, Microservices 2025 – 2026

- Designed a high-throughput microservices architecture for real-time financial transaction ingestion and fraud risk detection.
- Integrated ML anomaly detection models with RAG-based Generative AI agents to flag suspicious patterns and auto-generate audit summaries.

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence and Machine Learning 2022 – 2026
Shri Vishnu Engineering College for Women, India CGPA: 9.1 / 10.0

CERTIFICATIONS

- Claude Certified Prompt Engineer & AI Specialist** – Skilljar
- Oracle Cloud Infrastructure (OCI) Foundations Associate** – Oracle Academy
- Machine Learning Onramp** – MathWorks & Infosys Springboard
