PROFESSIONAL SUMMARY

Software Engineer and AI developer with production experience building scalable backend microservices, event-driven streaming architectures, and high-performance Retrieval-Augmented Generation (RAG) pipelines. Proficient in Python, Java, FastAPI, Apache Kafka, and ChromaDB. Proven track record of reducing query latency by 86% and integrating mission-critical enterprise systems.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C, C++

Backend & Distributed Systems: FastAPI, Node.js, Express.js, Microservices, REST APIs, Apache Kafka, Event-Driven Architecture

AI & Generative AI: RAG Pipelines, LLMs, ChromaDB, LangChain, Vector Embeddings, Cache-Augmented Generation (CAG), Scikit-Learn

Databases & Cloud: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Docker, Oracle Cloud Infrastructure (OCI), Git, CI/CD

PROFESSIONAL EXPERIENCE

Software Engineer – Dhan AI, Hyderabad, India

Aug 2026 – Present

- Developed and maintained scalable Python and FastAPI microservices for enterprise telecom quote-to-order workflows.
- Implemented event-driven streaming pipelines with Apache Kafka, enabling sub-second asynchronous messaging across distributed services.
- Integrated Salesforce and Microsoft Dynamics 365 APIs to synchronize high-volume customer transaction records reliably.
- Built resilient REST endpoints with token authentication, request throttling, and centralized error logging.

Software Engineer Intern – Dhan AI, Hyderabad, India

Jan 2025 – Jul 2025

- Engineered RESTful API endpoints and core domain models for enterprise telecom order management workflows.
- Structured database schemas, payload validation contracts, and automated Pytest test suites to ensure data integrity.
- Collaborated with senior engineers on service decoupling, reducing API response times across core microservices.

Team Lead – Software Development – EPICS at Arizona State University

Aug 2024 – Dec 2025

- Led end-to-end software development for an IoT water monitoring system, streaming ESP32 sensor telemetry to Firebase.
- Built predictive machine learning models in Python to analyze sensor readings and forecast water quality degradation trends.

PROJECTS

AcaRAG-Pro – Document Intelligence System | Python, FastAPI, Groq LLM, ChromaDB, Docker

2025 – 2026

- Engineered a production-grade RAG chatbot using ChromaDB vector search and Groq LLM to query institutional PDFs with source citations.
- Implemented Cache-Augmented Generation (CAG), cutting repeated query response latency from 3.5s to 0.5s (86% latency reduction).
- Containerized microservices using Docker and exposed asynchronous FastAPI endpoints handling concurrent document vectorization.

Transac-NOVA – Real-Time AI Financial Platform | Python, FastAPI, Apache Kafka, Scikit-Learn, Microservices

2025 – 2026

- Architected a high-throughput microservices pipeline for real-time transaction ingestion and fraud risk detection.
- Integrated ML anomaly detection with RAG-based LLM agents to flag suspicious patterns and auto-generate plain-text audit reports.

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence and Machine Learning

2022 – 2026

Shri Vishnu Engineering College for Women (SVECW), Bhimavaram, India

CGPA: 9.1 / 10.0

CERTIFICATIONS

- Claude Certified Prompt Engineer & AI Specialist** – Skilljar
- Oracle Cloud Infrastructure (OCI) Foundations Associate** – Oracle Academy
- Machine Learning Onramp** – MathWorks & Infosys Springboard
